

Product Overview

EhloMail provides a low-cost, managed email platform allowing you to securely exchange email messages, calendar appointments, contacts, files, chat, and task information from desktops, laptops or mobile devices.

Superior End-User Experience

By providing a rich, consistent user experience on all major platforms (Windows, Mac, Linux) - online through all Web browsers and via any desktop email client (MS Outlook, Mac Mail, Thunderbird, etc.) - EhloMail increases end user satisfaction and reduces support costs and user training needs. EhloMail's easy-to-use interface also includes collaboration tools, sophisticated mail filters and powerful search for large inboxes, calendars and attachments.

Be smart with your time and money

Organizations are under constant pressure to reduce the TCO (total cost of ownership) of IT (information technology) operations.

The overhead of IT management for email is a significant consideration in overall TCO. EhloMail provides simple email administration compared to other email platforms, using the administration console. With the admin console, IT staff can create and manage accounts, restore email accounts, reset user passwords, and more.

Costing less than a cup of coffee per user, per month, EhloMail is an affordable, reliable and hassle-free alternative to running your own in-house Exchange server.

Cut down email hosting related costs and free up your IT team's time, so they can focus on projects that actually bring you money!

Is spam getting the best of you?

With hundreds of spam emails flooding your inbox every day, even trying to identify a legitimate email from a malicious one can be a struggle. We are committed to putting a stop to all of this unsolicited correspondence and helping you focus on the important conversations instead.

What's more, we know that protecting data from viruses, spam, malware and hackers requires constant vigilance.

All EhloMail plans come with a powerful anti-spam & antivirus protection as standard, with custom filter rules available per mailbox.

EhloMail Security includes:

- inbound and outbound filtering
- spam and content filtering
- virus blocking
- zero-hour threat detection
- imposter email detection
- message quarantine and release

Worried about security and email loss?

Putting anything on the internet comes with risks. Hackers use email servers as gateways into your organisation. From simple phishing attacks to rootkit bots, they can gain access to all parts of your organisation. This is why security is so important!

Let us take over this burden!

We will ensure your mail server is duly patched and secured, so that your business emails are always safe from the latest threat landscape.

Moreover, EhloMail supports **enforced security policies** like strong passwords, **2FA** and **brute-force attack prevention**, adding a powerful protection layer to your email accounts and considerably decreasing the success rate of any potential hack.

Data governance made easy

Emails contain personal data due to their nature, which makes them subject to GDPR requirements - including restrictions regarding the geographical location of the data.

Using global providers, such as G Suite or Office365, means that your emails may be stored outside of the UK without your knowledge. This makes it increasingly difficult to enforce data governance policies and, as a result, hosting your emails in-house sounds like the only feasible option.

With EhloMail, your emails are hosted in a secure, GDPR compliant environment, based in our Manchester, UK datacentre.

EhloMail helps SMBs reduce the potential negative impact of data loss by automatically encrypting emails and ensuring safe delivery. In combination with **custom retention policies**, Data Loss Prevention (**DLP**) and **offsite archiving**, EhloMail allows administrators

to address any regulatory compliance concerns related to GDPR, PCI, HIPAA and other similar standards in a very easy way.

Quick restores

Accidentally deleted an important email, file or task? We've all been there! No need to fret though, we've got your back.

Email loss protection is provided by default on all plans. Our redundant backup solution is configured to store duplicates of your email accounts, on two independent backup instances.

With a retention period of 30 days, any items deleted from your inbox can be restored in no time.

Minimise financial loss

You rely heavily on email to do business and whilst you might manage a few minutes without email, what happens when your mail server is down for a few hours or even days? Unfortunately, SMBs can rarely justify the cost of building a highly redundant messaging infrastructure, but with EhloMail this is already covered by default..

With integrated **business continuity**, EhloMail allows you to continue sending and receiving emails, even when your mail server is offline. This includes:

- **24x7 emergency inbox access, when the normal email environment is unavailable**
- **Email spooling and failover**

Switch to EhloMail today and get ready to say goodbye to lost customer orders or missed notifications from your team and business partners!
